

LAUTARO AGUSTÍN MONTÓYA

JUNIOR GAME DESIGNER — SYSTEMS & GAMEPLAY DESIGN

Córdoba, Argentina / +54 9 11 3557-3316 / lautaroamontoya@gmail.com

[LinkedIn](#) / [Portfolio](#)

PROFILE

Game Designer in transition from a professional background in Tourism and Customer Experience, where I worked directly with people's decisions, needs, and expectations under time pressure. Self-taught in Unity and C# over the past 1-2 years, I design systems where player choices create lasting consequences rather than isolated outcomes — a pattern explored across several personal projects spanning card games, survival combat, and modular resource systems. Currently building a systems-design-focused portfolio and seeking a Junior Game Designer role in Systems or Gameplay Design.

SKILLS

Game Design: Systems Design · Gameplay Design · Game Mechanics · Player Decision Design · Risk/Reward Systems · Resource Management · Game Economy · Prototyping · Iteration

Technical: Unity · C# · Git / GitHub

Professional: Customer Advisory · Problem Solving · Communication · Adaptability · Amadeus · CRM · WhatsApp Business

Languages: Spanish (Native) · English (Fluent) · Portuguese (Fluent) · German (Learning)

GAME DESIGN PROJECTS

Keep It Alive

Solo Game Designer & Developer · Unity, C#, Git

In development

- Designed and implemented a card-based system in Unity/C#, combining Health, Energy/Action Points, Fatigue, Defense, and Overexertion into interdependent player-state mechanics.
- Built risk/reward decision points where resource spending directly affects future options, translating systems design into working, playable code.
- Demonstrates the full pipeline from mechanic design to implementation, using Unity, C#, Git, and GitHub.

Other Projects

Junkborn — Modular resource system where component wear forces continuous re-adaptation, designed to make adaptability more valuable than finding one optimal build.

Oxygen Zero — Turn-based combat system where a single resource (oxygen) functions simultaneously as health, action points, and a timer, creating escalating trade-offs between immediate action and survival.

Grey Market — Economy-driven system built on supply/demand, information, and faction suspicion, designed so market decisions carry systemic, thriller-like consequences.

Blood Debt — (Concept/prototype) Card game exploring decisions with delayed costs, where immediate benefits accumulate into future consequences through a deck-corruption mechanic.

Shift Protocol — (Concept) 3D movement system where momentum itself is the puzzle mechanic, shaping how players read and interact with the environment.

PROFESSIONAL EXPERIENCE

NEWFLY BY DESPEGAR

2024 – Present

Customer Advisor / Travel Coordinator · Córdoba, Argentina

- Advised customers with different travel needs and budgets, adapting recommendations and resolving issues in real time.
- Managed bookings and travel operations using Amadeus, CRM tools, and WhatsApp Business across multiple simultaneous cases.
- Supported and trained other sales agents on tools and processes, contributing to team-wide problem solving.
- Communicated clearly across diverse customer profiles under time pressure, balancing competing needs and expectations.

Previous customer service and sales experience: KMB, Eilat, Turistiando, and Konecta (2021 – 2024), including commercial and technical support across digital and social media channels.

EDUCATION

Guía y Asistente Superior en Turismo — University-Level Technical Degree (Tecnatura Universitaria) — Universidad Provincial de Córdoba

Self-Directed Study — Unity, C#, Game Design, Git/GitHub — Ongoing, 1-2 years
